

Red Car Paint Presents Bright For Auto Repair Fast Drying Time of Only 30 Minutes

Our Product Introduction

for more products please visit us on refinishcarpaint.com

Basic Information

- Place of Origin: China
- Brand Name: Audi
- Certification: ISO,MSDS,SGS
- Model Number: LS8S
- Minimum Order Quantity: 200L
- Price: 2.73USD/L-5.56USD/L
- Packaging Details: Box/Carton
- Delivery Time: 10-15 Work Day
- Payment Terms: T/T
- Supply Ability: 500 boxes per day

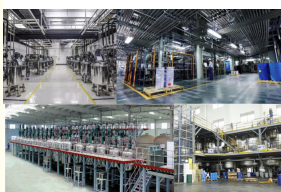

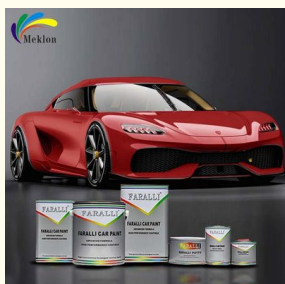

Product Specification

- Manufacture: Meklon
- Product Name: Orange Red
- Net Weight: 0.95
- Specification: 1LX12
- Shelf Life: 1-3 Years
- Durability: Long-lasting
- Uv Protection: Yes
- Main Raw Materials: Acrylic Resin
- Drying Time: Fast
- Port: Hong Kong, Huangpu, Shekou, Nansha
- Other Name: Car Finish Paint
- Dry Time: 30 Minutes
- Scratch Resistance: Yes
- Appearance: Liquid
- Highlight: **Fast Drying Auto Repair Car Paint,**

Product Description

Red car paint presents a bright high quality for auto repair

Manufacturer introduction:

Welcome to Meklon's automotive paint manufacturing plant!

Our plant is located in Guangzhou, China, covering a large area, with advanced production facilities and technologies, dedicated to providing you with the highest quality automotive paint products.

The spacious and neatly laid out factory has more than 3,000 square meters of modern plant, ensuring an efficient and smooth production process.

In terms of production equipment, we have invested a lot of money to introduce internationally leading manufacturing equipment. From precise color matching systems to advanced mixing devices, to high-precision filling production lines, each link is equipped with the most advanced machines to ensure product consistency and high quality.

product description:

Meklon's red car paint presents a bright, pure and lustrous red hue. This red not only shines brightly in the sun, but also maintains its unique charm under different light conditions. Whether it is a passionate bright red or a deep and elegant wine red, it can meet customers' pursuit of personalization and high quality.

Quality:

The use of high-quality raw materials and advanced production technology ensures the excellent quality of car paint. It has excellent hiding power and can easily cover the defects and old paint layers on the surface of the car body. At the same time, its excellent wear resistance and scratch resistance can maintain the integrity and beauty of the paint surface for a long time.

Weather resistance:

After rigorous weather resistance testing, it can resist the erosion of various harsh climatic conditions such as ultraviolet rays, acid rain, high temperature and low temperature. Even under long-term outdoor exposure, it is not easy to fade, powder or peel, and always maintains a bright and beautiful appearance.

Leveling:

It has excellent leveling properties and can be evenly distributed on the surface of the car body during construction to form a smooth and flat paint film without defects such as sagging and orange peel, which greatly improves the quality and appearance of the paint surface.

Curing agent and thinner mixing ratio:

The recommended mixing ratio of curing agent to paint is 1:2. The amount of thinner added should be adjusted according to the construction environment and construction method, generally between 5%-15%.

Construction method:

Before construction, the surface of the car body needs to be thoroughly cleaned, polished and degreased to ensure the adhesion of the paint surface.

Mix the car paint, curing agent and thinner in the prescribed ratio and stir until they are completely fused.

Use a spray gun for spraying. The pressure and spray distance of the spray gun should be adjusted according to the characteristics of the paint and construction requirements. It is generally recommended that the spray gun pressure is 2.5-3.5kg/cm² and the spray distance is 20-30cm.

Each spraying should be thin and uniform. After the first layer is dry, spray multiple times to achieve the ideal paint film thickness.

After the construction is completed, it should be cured and dried under suitable temperature and humidity conditions.

Production process:

Raw material procurement: Carefully select high-quality raw materials such as resins, pigments, solvents, etc.

Ingredients mixing: According to the strict formula ratio, the raw materials are accurately weighed and put into the mixing equipment for full mixing.

Grinding and dispersion: The pigment and other particles are evenly dispersed in the paint through the grinding equipment to ensure the uniformity and stability of the color.

Filtering and packaging: The ground paint is filtered to remove impurities and particles, and then packaged.

Transportation method:

Use professional chemical transportation vehicles for transportation to ensure the safety and quality of the paint during transportation. The vehicle has good sealing and protection measures to prevent the paint from leaking and being affected by the external environment. At the same time, follow the relevant transportation regulations and safety standards to ensure the legality and safety of the transportation process.

I hope the above introduction can help you better promote and sell your red car paint products!

The reason you choose us:

1. Competitive price with good quality;
2. Very good package, store products better in your country;
3. We have over 26 years experience, support you professional technical;
4. Fast delivery time, let you get products quickly after make order;

5. Reliable Manufacturer because our products quality approved by over 800 customers.

Factory History and Achievements:

Meklon Automotive Paint Manufacturing Factory was established in 2010. Starting from the initial small-scale production, after years of unremitting efforts and continuous development, it has gradually emerged in the automotive paint industry. In the early days of its establishment, facing fierce market competition and many technical difficulties, we adhered to the persistent pursuit of quality and innovative spirit, and continued to explore and try. By introducing advanced production technology and equipment and cultivating professional technical personnel, we have gradually accumulated rich production experience and professional knowledge. We continue to increase investment in research and development and are committed to improving product quality and performance. After countless experiments and improvements, we have successfully launched a series of automotive paint products with independent intellectual property rights, covering a variety of colors and functions, meeting the diverse needs of different customers.

In the past few decades, our factory has achieved many remarkable achievements. Our automotive paint products have not only been widely recognized and praised in the domestic market, but also successfully exported to many countries and regions, winning the favor of the international market.

We have established long-term and stable cooperative relations with many well-known automobile manufacturers, providing them with high-quality automotive paint solutions. At the same time, we actively participate in the formulation of industry standards and promote the advancement of industry technology, making important contributions to the development of the entire automotive paint industry.

Looking back on the past, we are deeply proud; looking forward to the future, we are full of confidence. We will continue to uphold the business philosophy of "quality first, innovation driven, customer first", constantly improve our own strength, provide customers with better products and services, and create more brilliance for the development of the automotive paint industry!
