

Superior Adhesion And Durability With 1K Car Paint Basecoat For Automotive Coating

Our Product Introduction

for more products please visit us on refinishcarpaint.com

Basic Information

- Place of Origin: China
- Brand Name: PORSHICHE
- Certification: ISO,MSDS,SGS
- Model Number: Yellow Green
- Minimum Order Quantity: 200L
- Price: 2.73USD/L-5.56USD/L
- Packaging Details: Box/Carton
- Delivery Time: 10-15 Work Day
- Payment Terms: T/T
- Supply Ability: 500L per day

Product Specification

- Name: Yellow Green
- Code: 117
- Voc Level: Low
- Net Weight: 0.95KG
- Heat Resistance: Yes
- Protection: UV-resistant
- Sheen: High Gloss
- Uv Resistance: Yes
- Material: Acrylic
- Application Method: Brush, Roller, Or Spray
- Adhesion: Strong
- High Light: 1K Basecoat
- Highlight: **1K Car Paint Basecoat,
Superior Adhesion Car Paint Basecoat**

Product Description

Product details:

1. Product Overview

Meklon is proud to introduce this 1K yellow-green car paint, which is a high-quality paint product specially developed and designed for the automotive coating field. 1K represents the characteristics of a single component, which makes it more convenient during the construction and application process, without the need for cumbersome mixing steps, which can effectively save time and labor costs, and also reduce the risk of quality problems that may arise due to improper mixing.

2. Color characteristics

This car paint presents a unique and eye-catching yellow-green color, which perfectly combines fresh green and bright yellow elements. This unique color combination makes the car stand out instantly after painting, attracting many eyes when driving on the road, and giving the vehicle a very personalized and dynamic appearance.

It has excellent color saturation, ensuring that it can maintain bright and rich colors regardless of lighting conditions, without fading or dulling. Even after a long period of sun and rain, it can still maintain its original bright color, so that your car will always look like new.

3. Product performance

This car repair paint has been rigorously tested and optimized. The car paint has excellent adhesion to various common automotive substrates, such as steel, aluminum alloy, etc. It can fit tightly on the surface of the car body, effectively prevent the paint from peeling and peeling, and provide a durable and reliable protective coating for the car.

It contains special anti-corrosion ingredients, which can form a solid protective barrier to resist the erosion of the car body by moisture, salt, acid and alkali substances in the external environment. Whether in humid coastal areas or in road environments where snow melting agents may erode in winter, it can ensure that the metal parts of the car body are not corroded and extend the service life of the car.

It is specially developed for the variability of outdoor environments and can withstand the test of various harsh climatic conditions such as direct sunlight, high temperature, low temperature, wind and sand. There will be no quality problems such as cracking and powdering due to long-term exposure to the outdoors, and the integrity and beauty of the paint surface will always be maintained.

4. Construction convenience

As a 1K product, there is no need to mix the paint in precise proportions like two-component paint. You only need to stir the paint liquid evenly before spraying it directly. This greatly simplifies the construction process for different construction scenarios such as auto repair shops and paint shops, reduces the requirements for professional skills of construction personnel, and even relatively inexperienced operators can easily complete high-quality painting operations.

It has a reasonable drying speed, which will not be too fast to cause problems such as poor leveling of the paint surface, nor too slow to affect the construction efficiency. Under normal construction environment temperature and humidity conditions, it can reach a surface dry state in a relatively short time, which is convenient for subsequent grinding, polishing and other processes, and effectively shortens the construction period of the entire coating project.

5. Environmental protection characteristics

We always attach importance to the implementation of environmental protection concepts in product research and development. This 1K yellow-green car paint adopts an environmentally friendly formula to minimize pollution to the environment and harm to human health during production and use. Its volatile organic compound (VOC) emissions are strictly controlled within the relevant environmental protection standards to ensure that the air quality of the construction site meets the requirements, and also provide a healthier and greener driving environment for car users.

In summary, our 1K yellow-green car paint product is a highly competitive and high-quality choice in the field of automotive coating with its unique color, excellent performance, convenient construction and good environmental protection characteristics. It can meet the multiple needs of car owners, auto repair companies and coating service providers for the beautification and protection of the car appearance.

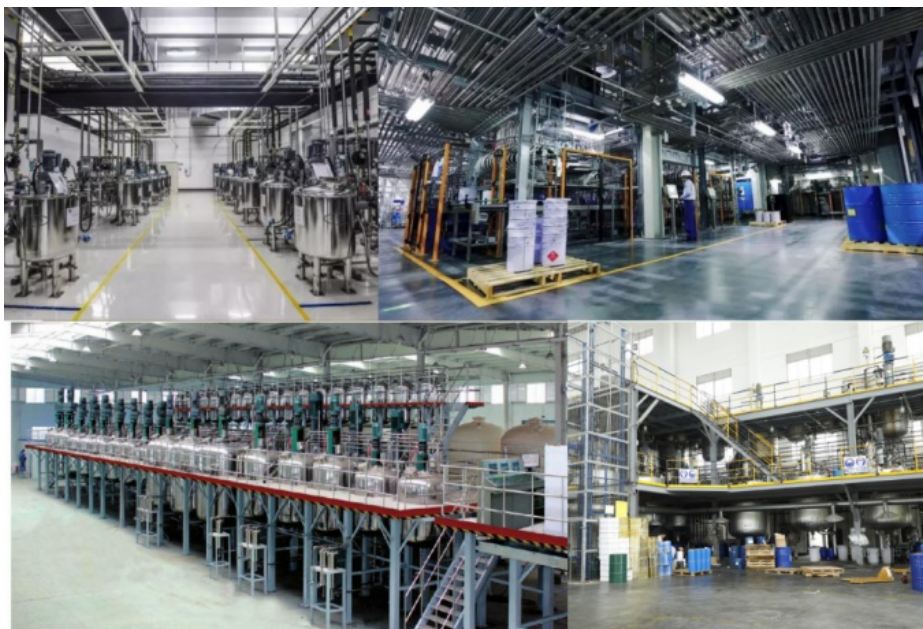

Manufacturer introduction:

In the vast world of automotive paint, Meklon has become a shining star in the industry with its excellent quality and innovative spirit. Since its establishment in 2010, we are about to usher in a glorious 15th anniversary.

Looking back, we started from a small processing plant, with our love and persistence in the automotive paint industry, and continued to grow step by step. Today, we have a huge raw material supply system, high-quality canning production lines and efficient production workshops, forming a complete set of production series. The total area of the company reaches more than 3,000 square meters, providing sufficient space for our production and R&D.

We are proud that we have a strong team of more than 200 professional workers. They are skilled and experienced, and with a high sense of responsibility and professionalism, they ensure that every production process is refined. At the same time, we have more than 10 experienced R&D engineers who keep up with the development trend of the industry, constantly explore and innovate, and are committed to providing customers with better quality, more environmentally friendly and more competitive automotive paint products.

It is worth mentioning that our company has also hired 2 paint mixing masters from PPG, the world's top automotive paint company. With their deep professional knowledge and rich practical experience, they check the color of our products to ensure that the color of each car paint is accurate and bright.

In our product series, 1K bright red car paint is particularly prominent. This car paint uses high-quality raw materials, and after a strict production process and a fine color mixing process, it presents a stunning bright red color. It has excellent hiding power, durability and gloss, which can give the car a unique charm and personality. Whether it is used for car repair or whole vehicle spraying, 1K bright red car paint can show excellent performance and make your car look brand new.
