

Efficient Atomization And Uniform Spraying Experience For Professional Automotive Paint Spraying

Our Product Introduction

for more products please visit us on refinishcarpaint.com

Basic Information

- Place of Origin: GUANGDONG CHINA
- Brand Name: Meklon
- Certification: ISO,SGS,MSDS
- Model Number: 4000B*RP
- Minimum Order Quantity: 10Pieces
- Price: USD8-9/Piece
- Packaging Details: Can/Carton
- Delivery Time: 5-8 work days
- Payment Terms: T/T
- Supply Ability: 50000Boxes/Month

Product Specification

- Product Usage: Exterior Car
- Material: Plastic, Metal
- Usage: For Repairing And Refinishing Car Paint
- Port: Nansha
- Manufacture: Meklon
- Manufacturer Location: China

Product Description

Fantasy Spray Gun 4000BRP is a high-performance spraying tool designed for professional users and DIY enthusiasts who pursue precision and efficiency. With the core advantages of "efficient atomization, uniform coloring, and stable durability", it redefines the spraying experience:

1. Core performance highlights

Powerful atomization technology: using an innovative gas-liquid mixing system, it can quickly decompose the coating into fine droplets (atomized particles $\leq 15 \mu m$), easily covering complex surfaces and fine gaps, eliminating defects such as sagging and orange peel, and allowing flat or irregular workpieces to present a mirror level uniform effect.

Intelligent pressure control design: equipped with multiple levels of air pressure adjustment (flexible adaptation from 0.2-0.8MPa), whether it is light coating of thin clear varnish or stacking construction of thick slurry coatings, it can accurately match material requirements through "one click pressure control", and even beginners can instantly become spraying experts.

Long lasting and durable structure: The gun body is made of lightweight aviation aluminum and corrosion-resistant stainless steel components, and the key sealing parts are upgraded to solvent resistant rubber, which is compatible with 8 mainstream media such as water-based paint, oil-based paint, UV coating, etc; After 10000 consecutive jet tests in the laboratory, the failure rate was less than 0.5%, and the service life far exceeded that of products of the same level.

2. Humanized details to enhance the construction experience

Ergonomic Grip: An ergonomically designed anti slip rubber grip that conforms to the curve of the palm, reducing hand fatigue even during prolonged work; The side quick release button supports "single finger nozzle change", completing nozzle cleaning/replacement in 5 seconds, increasing efficiency by 70%.

Intelligent air cooling system: Built in turbine cooling module, continuous spraying for 4 hours, gun temperature rise $< 25^{\circ}C$, avoiding paint denaturation or equipment loss caused by high temperature, especially suitable for batch orders or continuous construction of large projects.

3. Scene adaptation, covering diverse needs

Home Renewal: Door and window renovation, furniture color change, wall repair... Lightweight design+low-noise operation ($\leq 65dB$), DIY home without disturbing the public.

Industrial grade production: In scenarios such as automotive sheet metal spraying, metal component anti-corrosion, and 3C product shell coating, stable output and precise color control capabilities can meet ISO quality standards.

Creative Studio: Personalized creations such as art coatings, gradient effects, and special effects coatings, easily realizing the designer's creative ideas through "fine-tuning the fog amplitude+layered spraying".
