

Manufacturer's Price Atomic Ash Putty Automotive Repair Supplies

Our Product Introduction

for more products please visit us on refinishcarpaint.com

Basic Information

- Place of Origin: CHINA
- Brand Name: Meklon
- Certification: ISO,MSDS,SGS
- Minimum Order Quantity: 100Boxes
- Price: 3~17USD
- Packaging Details: Can/Carton
- Delivery Time: 7~15 work day
- Payment Terms: T/T
- Supply Ability: 1000Boxes/day

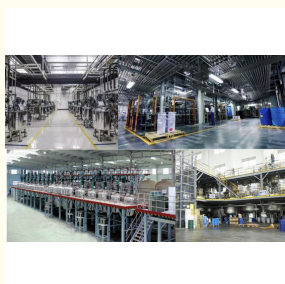

Product Specification

- Water Resistance: Yes
- Mixer Type: Static Mixers
- Package Size: Varies By Product
- Water Resistant: Yes
- State: Liquid Coating
- Net Weight: 0.95KG
- Professional Quality: Provides Professional Quality Finish
- Drying Time: Varies Depending On Temperature And Humidity
- Resistance: Scratch, UV, And Weather
- Finish: Glossy
- Number Of Coats: 2-3
- Highlight: atomic ash putty automotive repair, car paint refinish putty, automotive repair putty with warranty

Product Description

Manufacturer's Price Atomic Ash Putty Automotive Repair Supplies

Meklon product advantages: professional solutions with atomic ash and putty as the core

As a professional manufacturer in the field of automotive repair and industrial protection, Meklon's core advantages are mainly reflected in two basic repair materials: atomic ash (eye filling ash) and putty (filling putty) - these two types of products are not only key links in the body repair process, but also a concentrated reflection of Meklon's technical strength and quality control.

1. Atomic ash: an "industrial grade ruler" with precise filling and efficient repair

Meklon atomic ash is specially designed for high-precision vehicle body repair, using a composite formula of high-density fillers and modified resins, with three core advantages:

Super filling ability: For small defects such as pinholes, sand holes, and slight depressions, it can achieve uniform filling within a thickness range of 0.5-3mm at once, avoiding shrinkage and cracking problems caused by multi-layer stacking and greatly reducing repair time;

Ultimate polishing performance: After drying, it forms a delicate and smooth surface, which can be easily polished to a mirror effect with ordinary sandpaper, saving effort and reducing polishing dust, improving the smoothness and adhesion of subsequent painting processes;

Stable weather resistance: Through strict high temperature resistance (80 °C baking without deformation) and solvent resistance (resistance to primer/topcoat solvent penetration) tests, it ensures that the filling layer is tightly adhered to the subsequent coating, and there is no collapse or detachment during long-term use.

2. Putty: a versatile player that adapts to multiple scenarios

Meklon putty covers the full range of needs from basic leveling to complex defect repair, and its differentiated advantages are reflected in:

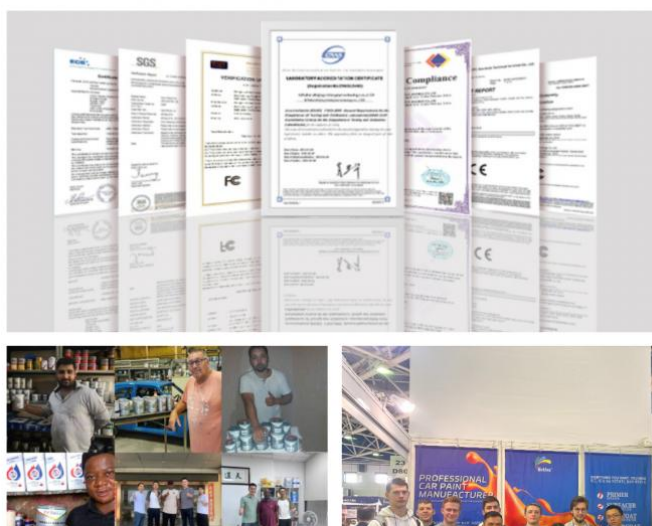

Flexible formula system: providing various types of models such as ordinary (fast drying and easy polishing), slow drying (fine adjustment), plastic special type, metal substrate special type (enhanced adhesion), etc., to meet the special needs of different parts and materials of the vehicle body;

Strong adhesion and crack resistance: Through the synergistic effect of substrate activation factor and flexible resin, putty can firmly adhere to various substrate surfaces such as steel plates, aluminum alloys, fiberglass, etc., while suppressing cracking problems caused by temperature changes or stress concentration;

3. Quality endorsement: full chain advantages from production to application

As a flagship product produced by our own factory, Meklon atomic ash and putty meet quality control requirements that exceed industry standards, including raw material screening, proportioning optimization, production control, and terminal application testing. Its reputation of "high one-time filling compliance rate, effortless polishing without damaging the substrate, and adaptability to multi brand coating systems" has been long-term verified by global automotive repair shops, 4S stores, and modification studios, becoming synonymous with "reliability, efficiency, and professionalism" in the field of body repair.

Summary: Meklon's atomic ash and putty are not only basic filling materials, but also the "invisible cornerstone" of vehicle repair quality - solving core pain points with technical precipitation, empowering efficient operations with professional formulas, and providing reliable guarantees for every repair process.
